

To whom it may concern:

Ms. Harvey has been the student teacher for Mr. Bair's honors biology class for the past two months. She has done an amazing job. She makes the lessons fun, and gets excited when she is teaching. Ms. Harvey has repeatedly stayed after school with me and has helped me in the areas I was struggling most on. With her good explanations and support I have done drastically better. Some of the topics she has helped me grasp a better understanding to are, dihybrid crosses, evolution, viruses and bacteria, and taxonomy. These five lessons that I have learned during Ms. Harvey's presence, have been the most challenging yet. She also helps the class by doing entertaining things like "the nose". During each lesson, Ms. Harvey would ask us questions about the new topic, and whoever had the correct answer got the nose because they "nose" something, and then pass it to another classmate when a different questions was asked. It made the class, and Mr. Bair laugh. We all thought it was funny, and helpful to get the whole class involved. She also helped us review for our animal test by acting out an animal and us guessing which animal it was, the body symmetry, and examples. This helped the whole class understanding of the lesson. She assigns easy and fun homework, like the shark identification worksheets for a lesson she taught about identifying animals in the same phylum, and a small project about any bacteria of our choice, that consisted of pictures, the scientific name of the bacteria, and symptoms the bacteria causes to humans. Ms. Harvey cares about each and every student she is currently teaching and it shows in her teaching and willingness to stay after school with those who need extra help. She is such an extraordinary teacher and I am so appreciative and grateful for all she has done for me. She has made honors biology a success for me. I will miss her and wish her nothing but good luck for the future.

Sincerely,
